

# Execution Report

Title: **Non-Standard Errors**

Authors: **ALBERT J. MENKVELD, ANNA DREBER, FELIX HOLZMEISTER, JUERGEN HUBER, MAGNUS JOHANNESSON, MICHAEL KIRCHLER, SEBASTIAN NEUSÜSS, MICHAEL RAZEN, UTZ WEITZEL et al.**

**Full reference:** Menkveld et al. "Non-standard errors". May 3, 2023.

The structure and contents of this execution report provided by **cascad** for the certification are similar to those recommended by the [AEA Data Editor](#).

## 1. DATA DESCRIPTION

This study is based on collected empirical data. 164 research teams from around the world received a dataset of transactions on the EuroStoxx 50 index futures on which they tested the same set of hypotheses. All teams then submitted a ["short paper"](#) summarizing their methodology and results. Those results were collected to analyze the variability of empirical finance results.

For a thorough description of the data, please refer to section I of the paper or to <https://fincap.academy/>.

## 2. CODE DESCRIPTION

The verification materials contain seven subfolders, each of which represents a stage of the study:

- a\_create\_balanced\_sample\_and\_summary\_statistics\_plus/
- b\_multiverse\_1\_convert\_monthly\_eurex\_files\_to\_daily\_sample/
- b\_multiverse\_2\_conduct\_multiverse\_analysis\_on\_daily\_sample/
- c\_analysis\_1\_create\_output\_per\_RT\_Hi\_for\_report/
- c\_analysis\_2\_standard-error-for-median-of-heteroskedastic-variables
- c\_analysis\_3\_create\_output\_for\_all\_RT\_Hi\_for\_report/
- d\_latex\_report/

Except for the latter, they are all divided into four self-explanatory subfolders: "code", "input", "output", and "temp". This structure follows advice from "Code and Data for the Social Sciences: A Practitioner's Guide," by Matthew Gentzkow and Jesse M. Shapiro. The idea is that the researcher opens a terminal, changes into the code directory of the stage at hand, and runs the python script in that code directory. This script then takes input data from the input directory, processes it, writes

temporary results to the temp directory, and writes the results to the output directory. The six folders also contain a bash script that will copy the various files from the output directory to the appropriate input directories of subsequent stages.

The final stage is the latex report, which requires latex to process the tex file.

### 3. VERIFICATION STEPS

The verification package was downloaded from the Dropbox repository on May 3rd and run as per readme, using python 3.8.10 on a computer with 256GB RAM, Intel Xeon Silver 4210R 2.4GHz (40 cores), NVIDIA RTX™ A5000, and Linux (Ubuntu 20.04).

According to the readme, “The multiverse was not rerun when preparing the final code as it requires substantial computing power”. Indeed, this part of the code “was run on Snellius, which is a national supercomputer in the Netherlands built for academic use (<https://servicedesk.surf.nl/wiki/display/WIKI/Snellius>). Snellius dedicated 128 CPUs and an internal memory of 200G when running the code”. Since none of our computer have that many CPUs, we did not run these sections of the code, and did not try to generate the results that rely on those multiverse analyses: that is, Panels (b) of Tables II and IA.7.

We received an error message when running “output\_for\_all\_RT\_Hi\_for\_report.py”, located in the folder “c\_analysis\_3\_create\_output\_for\_all\_RT\_Hi\_for\_report”:

*“Traceback (most recent call last):*

*File “\_\_init\_\_.pxd”, line 943, in numpy.import\_array  
RuntimeError: module compiled against API version 0x10 but this version of numpy is 0xf. Check the section C-API incompatibility at the Troubleshooting ImportError section at <https://numpy.org/devdocs/user/troubleshooting-importerror.html#c-api-incompatibility> for indications on how to solve this problem .*

*During handling of the above exception, another exception occurred:*

*Traceback (most recent call last):*

*File “output\_for\_all\_RT\_Hi\_for\_report.py”, line 29, in <module>  
from pyqreg import QuantReg  
File “/usr/local/lib/python3.8/dist-packages/pyqreg/\_\_init\_\_.py”, line 1, in <module>  
from .formula\_api import quantreg  
File “/usr/local/lib/python3.8/dist-packages/pyqreg/formula\_api.py”, line 4, in <module>  
from .quantile\_regression import QuantReg  
File “/usr/local/lib/python3.8/dist-packages/pyqreg/quantile\_regression.py”, line 6, in <module>  
from .c.blas\_lapack import lapack\_cholesky\_inv  
File “src/pyqreg/c/blas\_lapack.pyx”, line 10, in init pyqreg.c.blas\_lapack  
File “\_\_init\_\_.pxd”, line 945, in numpy.import\_array  
ImportError: numpy.core.multiarray failed to import”*

We resolved this issue by running the command “python -m pip uninstall numpy”. The script then worked as intended. We assume there was a conflict between two different installed versions of this package.

## 4. REPRODUCED RESULTS

We did not try to reproduce Panels (b) of Tables 2 and IA.7 since they rely on a multiverse analysis that requires a supercomputer.

As shown below, we reproduced all Figures and the rest of the Tables with accuracy.

### 4.1 TABLE I. SUMMARY STATISTICS

Original:

Panel (a): Quality of the #fincap community

	Research teams	Peer evaluators
Fraction with top finance/econ publications (see footnote 6)	0.31	0.85
Fraction including at least associate/full professor	0.52	0.88
Experience empirical-finance research (low-high, 1-10)	8.1 (1.7)	8.4 (1.8)
Experience market-liquidity research (low-high, 1-10)	6.9 (2.4)	7.8 (2.3)
Relevant experience (average of the above two items)	7.5 (1.3)	8.1 (1.7)
Fraction with "big data" experience (>#fincap sample)	0.65	0.88
Fraction teams consisting of two members (maximum team size)	0.79	
Number of observations	164	34

Panel (b): Quality of the analysis of research teams

	Research teams
Reproducibility score according to Cascad (low-high, 0-100)	64.5 (43.7)
Paper quality as judged by peer evaluators (low-high, 0-10)	6.2 (2.0)

Panel (c): Dispersion across teams of stage-1 results: Estimates, SEs, and  $t$ -values

	RT-H1 Efficiency	RT-H2 RSpread	RT-H3 Client Volume	RT-H4 Client RSpread	RT-H5 Client MOrders	RT-H6 Client GTR
